'As we enter FY27 with positive momentum, we do so with increased conviction in our portfolio holdings, particularly as we approach the important August reporting season'

Performance Review

Fund performance for the quarter ending June 2026 was +8.51% (net of fees) versus the benchmark return of +3.32%, as measured by the S&P/ASX Small Ordinaries Accumulation Index. This takes the since inception return for the Fund to +20.20% p.a. (net of fees) versus the benchmark of +8.71%.

Fund Review

The Fund returned -2.20% (net of fees) for FY26, compared with the Small Ordinaries Index return of +8.11%. Performance across the year was not uniform and characterised by a particularly strong start and finish with the Fund outperforming the benchmark during the first and fourth quarters. A challenging six-month period to March coincided with a confluence of market factors, including the sharp correction in the Technology sector amid the so-called "SaaS apocalypse", an unexpected shift in RBA policy from rate cuts to rate hikes that weighed heavily on Consumer Discretionary, and rising geopolitical tensions in the Middle East which drove energy prices higher. At the same time, a strong rally in resources—particularly among speculative and unprofitable companies—created a market backdrop that was less supportive of the Fund's investment style.

Encouragingly, momentum improved significantly towards year end, with the Fund delivering a strong +8.51% return in the June quarter. As we enter FY27 with positive momentum, we do so with increased conviction in our portfolio holdings, particularly as we approach the important August reporting season, providing a key catalyst for a number of our holdings to demonstrate recent weakness was largely a short-term dislocation. Herein lies the opportunity in our view.

Key contributors to performance over the financial year included long-term holding **Codan** (+123%), mining and specialist contractors **NRW Holdings** (+50%) and **Service Stream** (+39%) and telecommunications challenger **Aussie Broadband** (+29%). Detractors were concentrated within the Fund's technology, financial and consumer discretionary holdings, sectors that have historically been significant contributors to long-term performance. Notable detractors included **Tuas**, **Catapult Sports**, **Generation Development Group**, **Lovisa** and **Life360** – all of which remain Fund holdings.

Calendar year to date, small cap returns of -7.9% underperformed large cap (ASX 50) returns of +4.6% as rising domestic rates, ongoing geopolitical uncertainty and resources outperformance saw investors move into the safety of large caps. We believe this has now created an opportunity for investors to revisit smaller companies. Australia is closer to a cyclical peak in domestic rates, geopolitical risks have (slowly) begun to moderate and the investment opportunity associated with AI is broadening. The Small Ordinaries is now trading on a forward P/E ratio of approximately 15x, 1 standard deviation below its 10-year average, providing an attractive entry point for long-term investors.

Key Contributors

Contribution over the quarter came from **Megaport** (MP1) and **Life360** (360). Detractors for the quarter included **Tuas** (TUA) and **Generation Development Group** (GDG).

Megaport (MP1) returned +189.7% for the quarter following an exceptional period of execution. Initial scepticism of the Latitude.sh acquisition was replaced with bullish optimism as the scale of the AI, compute and networking opportunity became apparent. In May, MP1 announced the first wave of compute contracts, followed by a series of additional contracts in June alongside a capital raising to support the compute buildout.

Life360 (360) returned +39.9% for the quarter. While management watered down Monthly Active User (MAU) guidance in March due to several non-recurring factors, recent app download trends suggest user growth has begun to reaccelerate. Looking forward, a new South American marketing campaign, the seasonally stronger back-to-school period, replenishment of pet tracker inventories and Apple Watch compatibility provide additional catalysts for subscriber growth and monetisation. It's certainly been a long innings between the drinks break, but we continue to believe the market underestimates the company's earnings growth potential over the next 12-months, with any improvement in MAU trajectory removing the key overhang on the stock.

Returns¹ as at 30 June 2026

Key Detractors

Tuas (TUA) fell -62.7% over the quarter. Singapore's Infocomm Media Development Authority (IMDA) suspended its review of the proposed Simba-M1 transaction while investigating possible unauthorised spectrum use. This resulted in the lapsing of the transaction by vendor Keppel and a sharp reset in the share price. While any potential regulatory breach would be a serious failure of governance and risk management, there is currently insufficient information to assess the severity or nature of any breach. At the same time, we believe the share price has largely priced in a near worst-case outcome, including the possibility of licence cancellation. We conducted several industry meetings in Singapore and returned optimistic that a worst-case scenario is highly unlikely. We await further updates from the company and, remain aligned with founder and major shareholder David Teoh in seeing long-term shareholder value restored.

Generation Development Group (GDG) fell -14.8% over the quarter. Elevated market volatility, ongoing geopolitical uncertainty and the most significant changes to Australian tax legislation in decades are likely to weigh on net inflows during the typically seasonally stronger June quarter. Temporary rather than structural headwinds in our view, although they have contributed to weaker near-term sentiment. Importantly, the passage of the Capital Gains Tax (CGT) legislation and changes to taxation of trusts, reinforces a once-in-a-generation opportunity for investment bonds. We believe GDG is uniquely positioned to capitalise on this structural growth opportunity.

Outlook

As we closed out the financial year, June was once again characterised by heightened market volatility. In Australia, interest rate expectations appear to have peaked. While the market is not anticipating imminent rate cuts, we believe the domestic rate cycle is nearing its peak, with the Reserve Bank of Australia's next move more likely to be lower than higher.

Domestic small-cap performance remains highly sensitive to the expected path of interest rates. Over the past six months, elevated rates and global geopolitical uncertainty have compressed small-cap valuation multiples as investors rotated towards the perceived safety of large-cap equities. With the cash rate likely to remain on hold and valuations now sitting at approximately 15x forward earnings, one standard deviation below the 10-year average, we believe the risk-reward is becoming more attractive.

Against this backdrop, we have reviewed several rate-sensitive sectors to identify opportunities in areas of the market that have been heavily de-rated. While we acknowledge we may be early, equity markets are inherently forward-looking, and share prices typically begin to re-rate well before earnings reach their cyclical trough.

The Fund remains well positioned to benefit from the long-term structural themes of economy-wide electrification and grid modernisation, while continuing to back companies with idiosyncratic earnings growth opportunities across the technology, financials and industrials sectors.

Looking ahead, our focus turns to the August reporting season. Strong earnings outcomes and positive earnings revisions have the potential to shift investor attention back to company fundamentals.
